

# RENOLIT ALKORPLUS

## INFORMATION SHEET

### THROUGH PARAPET OUTLETS

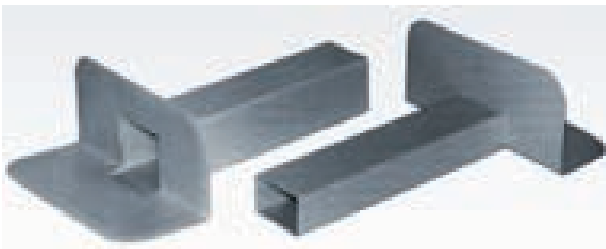

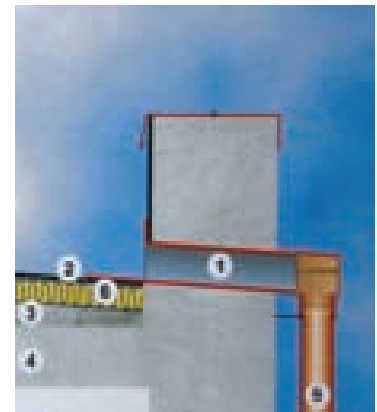

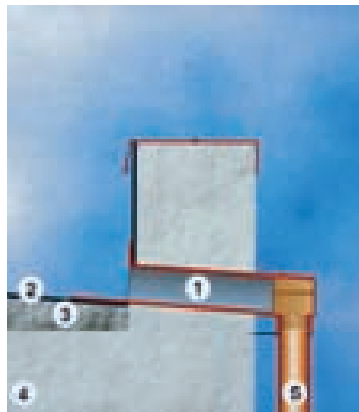

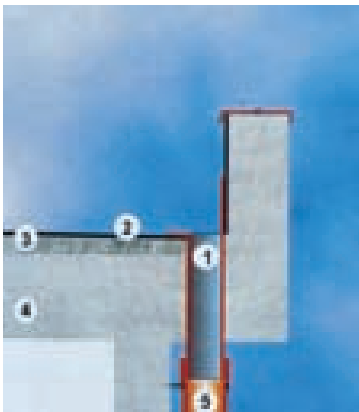

One of the most awkward aspects of removing water from balconies and flat roofs, where drainage is through the vertical wall, has been the satisfactory connection of the roof system to the outlets.

The facility of welding **RENOLIT ALKORPLAN** and **RENOLIT ALKORFLEX** to balcony outlets fabricated from unplasticised PVC, has simplified the historically tricky task of sealing roof sheet – usually bituminous – to metal castings.

**RENOLIT ALKORPLUS** <sup>81088</sup> PVC-u parapet outlets are available ex-stock in two sizes of aperture:  
100 mm x 100 mm  
100 mm x 65 mm

Alternatively, PVC-u outlets can be prefabricated from 4 mm sheet. Specialist manufacturers can produce units from drawings, usually within 10 days. The cost is quickly absorbed by the savings to be made from the ease and speed of installation. The **RENOLIT ALKORPLAN** or **RENOLIT ALKORFLEX** roof sheet is heat or solvent welded to the PVC-U creating a permanent seal and eliminating leaks at a critical location.

TPO products will not weld to PVC-u, and require metal outlets, glue and fixing rings.
