

### Description:

OXITAIS is a liquid product that is used as a rust converter used for iron protection. It consists of an organic treatment that stops the rusting process immediately by also preventing the formation of new rust, thus neutralising the surface.

### Uses:

It is used on metallic supports, cooling tanks, boilers, underground and air tanks, interior and exterior installations, etc. It is used as long as the surface to be treated only shows mild rusting.

### Features & benefits:

EASY APPLICATION. IT TURNS RUST INTO A PROTECTIVE LAYER.

### Surface preparation:

The background of application must show mild rusting. In case of a thick layer of rusting, the latter must be eliminated mechanically until a thin coating is formed.

### Application:

- Apply with a paint brush or roller in a similar way as paint or use a spray or gun for application.
- Apply thoroughly so as to enable OXITAIS to fully penetrate the layer of rusting, by forming a homogeneous film on the surface.
- In order to ensure a total chemical reaction, leave OXITAIS to act for at least 5 hours.
- In order to achieve maximum efficiency, both in interiors and exteriors, apply one coating of the primer as required and finish by using TEAIS paint, exclusively compatible, depending on each specific case.

### Technical Features:

Density: 1.05 Kg/L  $\pm$  0.05 at 20°C.

- : It only acts on oxide (it does not corrode or erode metallic surfaces).
- : It is non-abrasive and cures surfaces.
- : It forms a film that acts as barrier.
- : It converts oxide into a barrier that is black in colour that resists oxidation and seals the surface.

Aspect: It is quick drying with a black finish.

### Coverage:

15 m<sup>2</sup> per l.

### Clean up:

Clean using large amounts of water.

### Storage:

It is recommended to store this product for 1 year in tightly closed original packages.

The information provided on this technical data sheet and particularly the recommendations for the application and use of the product is based on our current knowledge and are provided in good faith, considering that the products are used, handled and stored under normal conditions and within the limits of its useful life. The possible differences between the materials, supports, and real conditions in the application site can be so important that it is no possible to establish a warranty with this document or any other information provided. The user must verify with a suitability test that the product conforms to the required use. Users should refer to the information included in the last technical data sheet edition.
